transcription factor 1, neural - rat

NyAlternate names: neural zinc finger factor-1

C;Species: Rattus norvegicus (Norway rat)

C;Accession: T46637

R;Jiang, Y.; Yu, V.C.; Buchholz, F.; O'Connell, S.; Rhodes, S.J.; Candeloro, C.; Xia, Y.F.
J. Bhol. Chem. 271, 10723-10730, 1996
A;Title: A novel family of Cye-Cye, His-Cye zinc finger transcription factors expressed i
A;Reference number: A58210; MUID:96210003; PMID:8631881
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A;Description: binds specifically to a cis-regulatory element of the beta-retinoic acid e nervous system and in the pituitary gland C;Keywords: DNA binding; transcription factor

NAB3 protein - yeast (Saccharomyces cerevisiae)
NyAlternate names: probable RNA/ssDNA-binding protein HWD1; protein P1945; protein YPL19
C;Species: Saccharomyces cerevisiae
C;Date: 10-Sep-1999 #sequence revision 10-Sep-1999 #text_change 09-Jul-2004
C;Accession: S48229; S65209; S60122
R;Wilson, S.M.; Oberdorf, A.M.; Datar, K.V.; Swedlow, J.R.; Paddy, M.R.; Swanson, M.S.
Submitted to the EMBL Data Library, January 1994
A;Description: Characterization of Nuclear Polyadenylated RNA-Binding Proteins from Sacch A;Accession: S48529
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A;Molecule type: DNA

S X	Claim 23; SEQ ID NO 44; 296pp; English.
{ E	The invention relates to a method of determining the angiogenic index of
35	a tissue or cell sample comprising assessing, in a sample, the expression
8 8	levels of one or more differentially-expressed gene from any of 34 DNA
3 5	samences given in the specification, where the levels are indicative of
36	bequences, given in an operation of the present

invention are useful for diagnosing, preventing and/or treating cancer, coronary artery disease, myocardial ischemia or coronary arteriosclerosis. They can also be used in research, drug discovery and forensic medicine involving angiogenesis. This sequence corresponds to one of the differentially expressed proteins of the invention.

The invention relates to 2495 novel polynucleotides (I) and their encoded polypeptides, sequences hybridizing to these nucleotides, sequences encoding partial polypeptides and sequences having 70% to 90% identity to the nucleotide and protein sequences. The nucleotides and polypeptides are useful as diagnostic markers or therapeutic target for the diseases or morbid states. They are also useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers. This sequence corresponds to a protein sequence of the invention.

Novel 2495 cDNA, useful for treating osteoporosis, neurological diseases. Alzheimer's diseases, Parkinson's diseases, dementia and various cancers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to a novel isolated polynucleotide comprising a mucleotide sequence selected from one of 1680 sequences, a mature protein coding portion of them, an active domain of them and their complementary sequences. The invention may be useful for the production of compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    51 SSTQIMVKTNMYHDEKVNFHVECKDYVKKAKVKINPVQQSRPLLSQIHTDAAKENTCYCG 110

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       with an antiarthritic, antiparkinsonian, neuroprotective, notropic, immunosuppressive, cytostatic, antiparatic, antiparatic, antiparatic, antiparatic, antinflammatory, introduction, the disclosed sequences may be useful for gene therapy. In polypeptides or their antibodies are useful for treating many diseases such as archritis, Parkinson's, Alzheimer's, autoimmune diseases, cancer, psoriasis, inflammatory bowel disease and infections caused by bacteria, viruses, fungi or parasites. The present sequence is that of a human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              209 SSTQIMVKTNMYHNEKVNFHVECKDYVKKAKVKINPVQQSRPLLSQIHTDAAKENTCYCG 268

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
```

The present invention relates to novel human coding sequences (ABQ99268-CABQ9608) and proteins (ABP64682-ABP65022). The sequences are useful in therapeutic, diagnostic and research methods. The polymucleotides may be used in the field of molecular biology as hybridisation probes, primers for PCR, for chromosome and gene mapping, for the recombinant production of protein, or in generation of anti-sense DNA or RNA. The polymucleotides are useful in diagnostics as expressed sequence tags (BSTS) for identifying expressed genes or for physical mapping of the human genome. The proteins may be used to maintain and expand cell population in a totipotential or pluripotential state and expand cell population in a totipotential or pluripotential state.

Cuseful for re-engineering damaged or diseased tissues, transplantation, manufacture of bio-pharmaceuticals or the development of bio-sensors. The polymucleotides and proteins are useful for preventing or ameliorating disorders involving aberrant protein expression or antiological activity, e.g. haematopoietic disorders, central/peripheral corving, immune disorders involving aberrant protein expression or biological activity, e.g. haematopoietic disorders, central/peripheral corving, immune deficiencies and disorders, infectious diseases caused by viral, bacterial or fungal infection, autoimmune disorders, allergic reactions and conditions, coagulation disorders, or cancer. The coplated mainly by sequencing by hybridisation, and in some cases, cisolated mainly by sequencing by hybridisation, and in some cases, capture of more or more public databases. Note: The sequence data for this patent did not form part of the printed specification, but

New isolated polynucleotide, useful in research, diagnostic or therapeutic methods, e.g. preventing or treating disorders involving aberrant protein expression or biological activity.

Claim 20; SEQ ID NO 588; 394pp; English.

The invention relates to a method of determining the angiogenic index of a tissue or cell sample comprising assessing, in a sample, the expression levels of one or more differentially-expressed gene from any of 34 DNA sequences, given in the specification, where the levels are indicative of the angiogenic index. The methods and compositions of the present invention are useful for diagnosing, preventing and/or treating cancer, coronary artery disease, myocardial ischemia or coronary artery disease, myocardial ischemia or coronary artery disease, myocardial ischemia or coronary artery disease, myocardial ischemia or coronary artery disease, myocardial ischemia or coronary or oronary or or also be used in research, drug discovery and forensic medicine involving angiogenesis. This sequence corresponds to one of the differentially expressed proteins of the invention.

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

Claim 20; SEQ ID NO 59634; 103pp; English.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed activity of (II) is useful in gene therapy techniques to rescore normal activity of (II) or to treat disease states involving (II) is useful antibodies against it, detecting or quantitating a

The present invention describes a method for detecting a stress that alters a functional interaction of a low density lipoprotein (LDL) (IDL) teceptor interaction domain (II). The method involves introducing a predetermined stress into a system which provides a stress-biased physical interaction of (I) with (II), where in the absence of the stress, the system provides an unbiased interaction of (I) and (II), and detecting the stress-biased interaction of (I) and (II), where a difference between BI and UI indicates that the stress alters the interaction of (I) and (II), where a difference between BI and UI indicates that the SENCAP. polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic patent did not appear in the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at

The invention provides the primary nucleotide sequence of the WSBV genome (AAH62689), predicted transcript sequences (AAH62689-AAH62839) and encoded proteins (AAG84910-AAG85051) and oligonucleotide sequences (AAH62840-63160) suitable for use as primers or probes. The nucleic acid molecules and proteins of the invention are useful for diagnosis and monitoring viral infection, in screens for antiviral agents and for monitoring viral gene expression or activity during a treatment regimen. The nucleic acid molecules are also useful as antisense constructs to control viral gene expression in infected cells and tissues and to create transgenic viral resistant shrimp.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (AAH62689), predicted transcript sequences (AAH62689-AAH62839) and encoded proteins (AAG8910-AAG88051) and oligomucleotide sequences (AAH62840-63160) suitable for use as primers or probes. The nucleic acid molecules and proteins of the invention are useful for diagnosis and monitoring viral infection, in screens for antiviral agents and for monitoring viral agence expression or activity furing a treatment regimen. The nucleic acid molecules are also useful as antisense constructs to control viral gene expression in infected cells and tissues and to create
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides the primary nucleotide sequence of the WSBV genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               transgenic viral resistant shrimp. (Updated on 06-AUG-2003 to correct OS
binding polypeptide with LDL receptor interaction domain. The method is useful for detecting and modulating signal transduction through LDL receptors. ABB04778 to ABB04909 represent LDL receptor binding proteins which are used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Shrimp white spot Bacilliform virus; WSBV; diagnosis; viral infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a method for identifying a candidate p53 pathway modulating agent, which comprises: (a) providing an assay system comprising a mp53 (modulator of p53) polypeptide or nucleic acid or its cagment or derivative; (b) contacting the assay system with a test agent conditions where the system provides a reference activity except in the presence of the rest agent; and (0) detecting a test agent-biased activity, where a difference between the test agent as a candidate p53 pathway modulating agent; Also described: (1) modulating the p53 pathway in a mammalian cell; and (3) diagnoshing a disease in a patient. Mp53 has cytostatic activity, and can be used in gene therapy. The method is useful for identifying a candidate p53 pathway modulating agent for preparing a composition for diagnosing or treating e.g., cancer. The present sequence represents a human MP53 protein, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      soft tissue sarcoma; cytostatic; gene therapy; vaccine; screening; human.

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples and comparing the presence of soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and sorcening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel method of predicting or determining whether a mammal will respond or is responding to an anti-cancer agent that medulates cyclin-dependent kinase (cdk) activity. The method comprises measuring the level of one or more biomarkers selected from 2774 biomarkers given in the specification (nuclectide sequence SEQ ID NO:1246 (Genbank EST W38729) is especially preferred). The method of the invention is utilized in a kit for determining or predicting whether patient would be susceptible or resistant to treatment by an agent modulating cdk activity. The invention also describes a method for utilizing individualized genetic profiles for treating diseases and disorders based on patient's response and molecular level, specialized microarrays comprising the biomarkers described, antibodies directed against the biomarkers and a cell culture model to identify biomarkers. The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-coxazolyl]methyllthiol-2-thiazolyl-4-piperidine carboxamide, 0.5-L-taratic acid salt. Note: The sequence data for this patent did not form the the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.init/pub/published pot sequences. This sequence represents a biomarker used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

whether a mammal will respond or in responding to an anti-cancer agent that modulates cyclin-dependent kinase (cdk) activity. The method comprises measuring the level of one or more blomarkers selected from 2774 biomarkers given in the specification (nucleotide sequence SEQ ID NO:1246 (Genbank EST W28729) is especially preferred). The method of the invention is utilized in a kit for determining or predicting whether patient would be susceptible or resistant to treatment by an agent modulating cdk activity. The invention also describes a method for utilizing individualized genetic profiles for treating diseases and disorders based on patient's response and molecular level, specialized microarrays comprising the biomarkers described, antibodies directed against the biomarkers and a cell culture model to identify biomarkers.

The cdk modulator is preferably N5-[[5-(1,1-Dimethylethyl)-2-oxazolyy]methyllthiol-2-thiazolyy-4-piperidine carboxamide, 0.5-Letartaric acid salt. Note: The sequence data for this patent did not form the tenth from WIPO at fitp. Wipo.int/pub/published pot sequences. This sequence represents a biomarker used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAW81172
```

```
CC family of transcriptional regulator genes containing a bromodomain (BAZ, Bromodomain with Atypical Zinc finger) which are expressed specifically CC in testis tissue and also in certain tumour lines. Transgenic cells may CC be used for the preparation of the BAZ1-apha, BAZ1-beta BAZ2-beta and CC BAZ2-beta proteins. These proteins can be used in the treatment of cancer CC and other proliferative disorders, and in screening of compounds for CC their binding ability to the expression products (e.g. for use as drugs CC by modulation of transcriptional regulation)

Sequence 44, Application US/10164595

Patent No. 6657054

GENERAL INFORMATION:

APPLICANT: Origine Technologies, Inc.

TITLE OF INVENTION: Regulated Angiogenesis Genes and Polypeptides

FILE REFERENCE: 1U 103 R1

CURRENT APPLICATION NUMBER: US/10/164,595

CURRENT APPLICATION NUMBER: US/10/164,595

CURRENT FILING DATE: 2002-06-10

NUMBER OF SEQ ID NOS: 80

SOFTWARE: PatentIn version 3.1

SEQ ID NO 44

LENGTH: 639

Patent No. 6566482

GENERAL INFORMATION:

TATLE OF INVENTION: TRANSCRIPTIONAL REGULATOR;

FILE REFERENCE: 66501-64201

CURRENT APPLICATION NUMBER: US/09/418,710

CURRENT FILING DATE: 1999-10-15;

PRIOR APPLICATION NUMBER: DET/JP98/01783

PRIOR PILING DATE: 1999-10-24

PRIOR FILING DATE: 1997-10-24

PRIOR FILING DATE: 1997-04-18

NUMBER OF SEQ ID NOS: 73

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 27

LENGTH: 1527

TYPE: PRI

ORGANISM: Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             APPLICANT: JOHES, Michael H.
